

Oonava CRM: Airtable setup for Delight

The Oonava website now handles every enquiry automatically. AI reads it, scores the lead, replies by email, alerts us on WhatsApp and follows up on day 2, 5 and 10. This sets up the CRM side in Airtable.

1. Create the base

Create a new base called **Oonava CRM** with one table called **Leads** (exactly that name).

2. Add these fields

The names must match exactly, including capitals and spaces, or the automation can't write to them.

Field name	Field type
Name	Single line text (primary field)
Email	Email
Company	Single line text
Phone	Phone number
Message	Long text
Source	Single select: Contact form , Estimate tool
Summary	Long text
Industry	Single line text
Recommended Tier	Single select: Essential Automation , Connected Automation + AI , Custom Systems , Unclear
Score	Single select: Hot , Warm , Cold
Score Reason	Long text
Reply Sent	Long text
Status	Single select: New , Contacted , Replied , Booked , Won , Lost , Unsubscribed
Follow-ups Sent	Number (integer, default 0)
First Contacted	Date, with time included
Last Contacted	Date, with time included

3. Create an access token

- Go to airtable.com/create/tokens and create a token named "Oonava website".
- Scopes: `data.records:read` and `data.records:write`.
- Access: only the **Oonava CRM** base.

4. Send Samad two things

- The **token**.
- The **base ID**: the part of the base URL that starts with `app...`, e.g. `airtable.com/appXXXXXXXXXXXXXXXX/...`

Please don't send the token in a normal WhatsApp message or email. Use a one-time secret link (e.g. onetimesecret.com) or share it on a call.

5. One rule for the team

When a lead **replies to our email**, change their Status to **Replied**. That stops the automatic follow-ups. If a call is booked and doesn't update by itself, set it to **Booked**.

Optional

- Views: "Hot leads" (Score = Hot), "Needs follow-up" (Status = Contacted), "Booked calls" (Status = Booked), and a Kanban view grouped by Status.
- Later, in n8n: detect replies in the `hello@oonava.com` inbox and set the lead's Status to Replied automatically.
