oonava.

Oonava CRM: Airtable setup for Delight (updated for the team dashboard)

The website handles every enquiry automatically, and the new admin dashboard at oonava.com/admin reads and writes the same Airtable table. This is everything the table needs.

---

1. Create the base

A base called **Oonava CRM** with one table called **Leads** (exactly that name). If you've already built it, just add the fields marked **NEW**.

---

2. Fields

Names must match exactly, including capitals, spaces and hyphens.

Field name	Field type
Name	Single line text (primary field)
Email	Email
Company	Single line text
Phone	Phone number
Message	Long text
Source	Single select: `Contact form`, `Estimate tool`, `Manual`, `Gemini Spark`, `LinkedIn`, `Referral`, `Event`, `Cold call`, `Import`
Summary	Long text
Industry	Single line text
Recommended Tier	Single select: `Essential Automation`, `Connected Automation + AI`, `Custom Systems`, `Unclear`
Score	Single select: `Hot`, `Warm`, `Cold`
Score Reason	Long text
Reply Sent	Long text
Status	Single select: `New`, `Contacted`, `Replied`, `Booked`, `Proposal` (**NEW option**), `Won`, `Lost`, `Unsubscribed`
Follow-ups Sent	Number (integer, default 0)
First Contacted	Date, with time
Last Contacted	Date, with time
Notes	**NEW** · Long text
Activity	**NEW** · Long text
Deal Value	**NEW** · Currency (€), no decimals

Monthly Value	**NEW** · Currency (€), no decimals
Next Action	**NEW** · Date (no time)
Assigned To	**NEW** · Email (the team member's login, e.g. fel@oonava.com)

2b. Team dashboard tables (same base)

Only needed if we keep team data in Airtable. If Samad connects Supabase, skip this section. Fields without a type are single line text. The first field listed is the primary field.

Table	Fields
Team	name · email (email) · title · permissions (multiple select: admin, sales, outreach, delivery, finance, marketing) · password_hash (long text) · active (checkbox) · last_login (date + time)
Projects	name · client · lead_id · package · stage (single select: Onboarding, Building, Testing, Live, Support, Paused) · owner_id · due_date (date) · setup_fee (number) · monthly_fee (number) · links (long text) · notes (long text)
Tasks	title · details (long text) · assignee_id · due_date (date) · done (checkbox) · project_id · lead_id · created_by
Invoices	number · client · project_id · kind (single select: Setup, Monthly, Extra) · amount (number) · currency (single select: EUR, GBP) · due_date (date) · status (single select: Draft, Sent, Paid, Overdue, Cancelled) · paid_at (date + time) · notes (long text)
Activity	action · user_id · user_name · target · link

Field names are lowercase with underscores exactly as written. Airtable's free plan allows 1,000 records per base, and these tables grow fast.

---

3. Access token

- airtable.com/create/tokens → token "Oonava website".
- Scopes: `data.records:read` and `data.records:write` .
- Access: only the **Oonava CRM** base.

---

4. Send Samad

- The **token**, and the **base ID** (`app…` from the base URL).

Send the token through a one-time secret link (e.g. onetimesecret.com) or a password manager, not WhatsApp or plain email.

---

5. Team rule

When a lead replies to our email, set Status to **Replied** (in Airtable or the admin dashboard). That stops the automatic follow-ups.

Later (n8n / Make)

Detect replies in the hello@oonava.com inbox and set Status to Replied automatically.
